

epiqagility

Automatically redact documents based on your criteria to streamline your redaction workflow, saving valuable time in the review process

Epiq offers Blackout, an automated redaction tool for Relativity developed by Milyli. Blackout automatically applies redactions - and highlights - to both native Excel and image files, eliminating the need for tedious and time-consuming manual redaction.

Redact faster

Blackout can auto-redact even the largest document sets in a matter of hours – saving countless hours of reviewer time. Simply specify the key terms, phrases, or repeated patterns of numbers or letters (such as credit card numbers, Social Security numbers, email addresses, or employee ID numbers) to redact, as well as the type of redaction or highlight to apply, then run Blackout on your entire document set.

How does it work?

Once Blackout has finished applying redactions, reviewers can easily go through the list of Blackout redactions on each document to approve, reject, or override each one from right within the Relativity viewer. Blackout integrates seamlessly with existing Relativity workflows and provides comprehensive redaction logs, ensuring a higher-quality, more efficient, and more defensible review.

Blackout allows you to:

- Easily apply redactions across a document set based on words, phrases, or repeated patterns
- Redact and highlight both native Excel and image-based files, as well as manually redact native Excel files within the Relativity viewer
- Select from all Relativity redaction types – black, cross, text, white, inverse, or full-page
- Specify exactly where the redaction should be applied - such as the term, the full page, the row, the cell, etc.
- Quality check redactions to approve, reject, or manually override them
- Review redactions within the Relativity document viewer without interrupting the review workflow
- View progress of current redaction review and export comprehensive CSV redaction logs
- Dramatically increase the speed of your review

People. Partnership. Performance.
