

Take control of your eDiscovery workflow (and spend) with an expert-designed, self-service platform

Epiq Discovery is a cloud-based, end-to-end eDiscovery platform, with a pioneering user interface that maximizes user experience. We created this tool based on simplicity and ease-of-use, while also fulfilling rigorous legal and business requirements.

Reduce cost and manage all your eDiscovery work

Get access to all the same capabilities available in traditional full featured platforms, but without all the traditional overhead costs.

Replace legacy tools and modernize your technology

We've made it easy to migrate legacy cases with a tool that lets you collect, process and analyze documents all in one central place.

Increase your team collaboration

Increase efficiency by streamlining the way you work. Provide a shared repository for your team to work on the same matters.

Get the best of both worlds: A self-service tool backed by a full-service eDiscovery provider

While a self-service eDiscovery tool is an appealing concept, what if your in-house team gets “stuck” while working on a matter? Working with Epiq means you have access to seasoned eDiscovery experts if and when you need it. We can even help you transition a matter that has outgrown your team to a full service platform.

Epiq is the global leader in technology-enabled legal services. We support law firms and corporate legal departments with world-class teams, proven processes, effective end-to-end strategies, and a suite of leading-edge technologies to drive impactful operational change, scalable execution, and business-wide efficiencies. Chambers and Partners recognizes Epiq Global as a leading provider of eDiscovery services in the US and UK in its 2021 Litigation Support Guides.

Leverage Epiq Discovery's end-to-end workflow with built in automations

With Epiq Discovery, you can process and review documents in minutes!

Collection

Collect data from multiple sources, including

- Email services
- Cloud services
- Social Media platforms

Processing

Process data using our proprietary, cloud-based technology that scales dynamically and is 2x faster than the competition

Analysis

Analyze your data using our proprietary theme wheel. Filter your documents so that you only review what you need to.

Review

Enjoy the most intuitive review platform on the market. With Epiq Discovery you will be tagging documents within minutes.

Production

Produce documents easily by creating customized templates, workflows and production processes.

The Epiq Advantage

Ease of use

At Epiq we believe an eDiscovery platform should be intuitive with minimum training needed.

Multi-language

Epiq Discovery includes foreign language capabilities with fully-customizable workflows that support 195+ languages.

Security

Epiq Discovery encrypts all data, whether in transit or at rest, and leverages the existing security infrastructure of the best cloud partners available to ensure all client data is safe.

All-in-one platform

Epiq Discovery eliminates the need to use multiple, independent tools and platforms during the lifecycle of an eDiscovery project. It even includes multi-media viewing tools.

Respond quickly to last minute requests

With Epiq Discovery, avoid the added time associated with working and onboarding an external team by keeping the work in-house.

Available anytime, anywhere

Epiq Discovery is hosted in the cloud and accessible over the internet. Users can access it wherever they are connected. Quickly spin up a hosting location based on your clients/regulatory need.

Automated workflows

Epiq Discovery's "Process Automation" feature allows users to collect, process and filter data, promote documents for review, image documents, and produce documents all within a few clicks.

Analytical capabilities

With Epiq Discovery's platform you get advanced analytical features to triage your data early in the discovery process and identify documents vital to each matter.
