Data mining, mapping, and reporting services by AACER® leverage court data to enhance servicing, investing, and legal service activities by automating workflows, creating work product, and generating insights

Problem: Banks, non-bank servicers, investors, and law firms all need to mine, map, and transform electronic data from the bankruptcy court system in order to complete bankruptcy activities.

What we offer

Flexibility: AACER® data services are available through a variety of ways like API and web services to deliver data on daily, weekly, and any other time frames to meet your needs.

Insight: Servicers and investors use us to scrub acquired loan portfolios, to provide loan scorecards, facilitate servicing activities, and complete transaction due diligence.

Confidence: Banks and non-bank servicers, investors and law firms use AACER® data services extensively. Servicers use AACER® to compare loan documents to servicing system data and report exceptions. They use AACER® to retrieve trustee payment voucher data and automatically identify corresponding accounts in loan portfolios for payment processing and for many other day-to-day activities that would otherwise be risk-prone and costly.

Solution: AACER® combines industry-leading proprietary technology for mining, mapping, and reporting electronic data. Then AACER® validates and delivers the data you need, the way you need it.

How we deliver

Our data services combine industry-leading, proprietary character recognition, extraction, and mapping technology, quality assurance analysts and court process, bankruptcy and other expertise. We mine and transform any electronic data in the bankruptcy court system, including from within documents. We compare and validate court data with system of record data, trustee payment data, and other data to provide a spectrum of high-value data services. We deliver data in text and excel formats, through our online platform and using our APIs and web services for automated, system-to-system exchange.

People. Partnership. Performance.
