

Uncover relevant information hidden within structured data repositories.

Extract and analyze information from enterprise databases. Present relevant information in context to meet legal and compliance needs while ensuring data privacy and adhering to regulatory standards.

- Convert raw data into meaningful and contextual information ready for review or analysis.
- Extract and process data from enterprise databases, including legacy systems.
- Comply with privacy regulations by anonymizing or redacting sensitive data.
- Output data in a format consistent with production requirements using custom reports

Databases Containing Sensitive Information

Anonymize data, including extra protections for individuals in small population groups.

HR and Payroll Systems

Ensure data from systems that contain personal information are properly redacted during production.

Industry Specific Databases

Interrogate data from unique systems that require specialized knowledge.

Legacy Databases

Reverse engineer legacy databases when internal expertise is not available.

Why Epiq Legal Solutions

Experience the advantage of solutions from a partner specializing in legal.

Drive decisions with AI solutions that combine people, process, technology, and data.

Answer

Case-Related

Questions

Differentiators

- Obtain reviewable data from legacy and modern structured databases, working with a team with over 30 years of experience.
- Answer case-related questions by deploying data analysts who extract and combine data found in enterprise databases.

Get the help you need, from structured data collection to a full analysis with counsel guidance.

Data Identification

- Create a data map of your systems of record through interviews with experts who routinely work in these systems.
- Identify where information resides, distinguishing between copies for convenience versus systems of record.
- Extract data when institutional knowledge is gone, including from mothballed systems, undocumented systems, and systems obtained during acquisitions.

Create a Data Map

Intelligent Analysis

- Answer complex questions that require analysis across multiple fields and data sources working with expert analysts to access the story behind the data.
- Enrich raw data with contextual information by identifying related fields and information that exists within multiple tables.
- Extract structured data from HR systems, payroll systems, industry mandated databases, and more.

Meet Production Requirements

Regulatory and Privacy Requirements

- Comply with guidelines by anonymizing or redacting data.
- Supply data, including metadata, in a format that is easy to ingest.
- Follow accepted Sedona Conference guidelines for structured data productions.

Meet HIPAA, PCI, GDPR, and CCPA Requirements
