scalable technology and in-depth management tools

Technology and software

Epiq Link™ is a fully-automated interface that connects you online to your case from one convenient site. It is easier than ever to view and track depositions on the go from any location in the U.S.

Epiq Link™ features and functions

- Case management on an encrypted portal
- Email notifications and job confirmations
- Job status tracking
- Secure download of transcripts and exhibits
- Search for files in several data fields
- Filtering for focused search results
- Save searches that dynamically update
- Set predefined views for searches
- Tag files for categorization and filtering
- Account/grouping for related jobs and orders

National accounts

The national account program is a concierge-level partnership designed to create even deeper efficiencies and capitalize on the many benefits of a preferred court reporting relationship. The program addresses:

- High costs and inconsistent rates across cases and geographies
- Inconsistent quality due to the large number of court reporting providers used
- Administrative headaches related to invoicing irregularities
- Time spent on vetting multiple vendors, which takes highly paid legal professionals away from their core focus
- Data security, all confidential data is maintained and protected in one secure location rather than with multiple vendors

Case management

When needed, Epiq's case managers organize the project's details, locations and orders while acting as a communication hub to minimize distractions from the litigation process.

part of the solution— in whole or in part

Whether you use our court reporting solutions alone or with our other litigation support capabilities, we deliver efficiencies every step of the way.

epiq production

As the litigation process moves from complexity to clarity, Epiq resources and resourcefulness help you streamline matters to save time, money and energy—night and day, around the world.
