

# epiq process

**Offering end-to-end transparency throughout the eDiscovery process, DMX (DocuMatrix) gives you a holistic picture of data flow; from the original data sources to what's been processed, to what was ultimately reviewed and produced. Most importantly, all the information is woven together seamlessly in an interactive and easy-to-use dashboard**

## The DMX dashboard shows users:

- The stage in which the data resides
- Where each data source has been
- The data and custodians included in the current data set
- Data size and document count

## How We Deliver

With the DMX dashboard, data from previous projects can easily be referenced to inform decisions about future cases. The platform allows you to interact with the data and find information that never would have been revealed otherwise. The dashboard is also review platform agnostic, providing review and production metrics for both Epiq DMX and Relativity®. DMX has been used in the industry's largest global litigations, investigations, and regulatory actions.

## Processing

DMX delivers the most powerful data processing in the industry. Excavating deep into data files, DMX fully extracts metadata, text, embedded objects, and domains, so you don't miss information critical to your matter.

With the constant evolution of file types, our software engineers continually strengthen DMX to handle a wide range of diverse data formats, including Lotus Notes, Bloomberg data, Unix Mail, chat, wikis, SharePoint, audio and video files, as well as emerging data types, such as social media.

And DMX uses the native application interfaces to analyse, extract, and load data, so all data you load remains in a native format that you can recognise and review online instantly. No need to adjust the data, and no time-consuming TIFF or PDF conversions.

Real-time information, a complete view of data flow and extensive details on every custodian: with DMX, your data is always at your fingertips.

## Review

Vast amounts of data are stored across the globe in differing formats, file types, and languages. The cost for discovering this data is growing, and flawless execution is required from start to finish. DMX is laser-focused on review efficiency. The DMX platform equips you with essential discovery management tools to achieve an efficient, intelligent assessment, and review. With DMX, you get:

- Advanced analytical features to triage your data early in the discovery process and identify documents vital to your matter, leaving you with a smaller, more focused data set
- An automated work flow that reduces the risk of human error and keeps data and crucial steps from falling through the cracks
- Foreign language capabilities via fully-customisable work flows that support 195+ languages
- Secure multi-party project collaboration
- Review accelerators: increase review speeds by up to three times, dramatically reducing document review costs
  - Email threading
  - Search and cull methodologies
  - Clustering
  - Early case assessment (ECA)

DMX delivers deep business insights into data across all eDiscovery processes, including:

**Budget tracking**

**Project outcome modelling**

**Reviewer productivity**

**Outside counsel productivity**

**Delivery timelines**

**Case strategy decisions**

**People. Partnership. Performance.**
