

epiq security

With eNotifySM, legal teams can prevent the destruction of data and improve the defensibility of the data preservation process

Built for Microsoft Office 365

eNotify is the only legal hold management and preservation solution built from the ground up for Microsoft Office 365. By seamlessly integrating with Office 365 and Azure Active Directory, legal teams can quickly and easily fulfill their preservation obligation by initiating legal hold notices to custodians, while automatically creating eDiscovery cases and holds in Office 365.

How it works

Say goodbye to manual, time consuming and error-prone litigation hold and preservation processes with the only legal hold solution built for Office 365. eNotify enables legal teams to manage the entire legal hold process of notifications, interviews, reminders, and preservation, all without the involvement of IT.

Benefits

- Cloud enabled
- High availability
- Data protection and security
- Ability to clean data before moving file share to the cloud
- Data encryption
- Secure authentication
- Advanced threat protection
- SOC 2 type 2 report/SSAE 16/ISAE 3402 data centre

Simple licensing

eNotify is offered as a subscription model. It is licensed based on the concurrent number of users on hold. Unlike other legal hold solutions that license based on the number of hold notices sent, you only need a single license per user on hold, regardless how many hold notices they have or will be sent. And there are no separately licensed modules for the integration with Office 365 which can increase cost. Everything is included under a single licensing SKU.

People. Partnership. Performance.

Services

eNotify does not require any professional services to be implemented. Once your subscription is activated, your eNotify instance is provisioned and immediately available for use. For customers that intend to leverage Azure Active Directory and Office 365 integration, the Epiq customer satisfaction team will help set this up in a matter of minutes, and with minimal IT involvement. eNotify is extremely simple and intuitive to use, and zero training will be required for most organisations. With that said, training services are offered if needed, as well as a few supplemental advisory service offerings.
