epiq results

Epiq provides the configuration and deployment of various Office 365 features (AIP, ATP, CAS, DLP, etc.) that help to meet General Data Protection Regulation (GDPR) requirements

Problem

GDPR imposes new rules on organisations in the European Union (EU), offer goods and services to people in the EU, or that collect and analyse data tied to EU residents, regardless of where they are located. With new regulations affecting personal privacy, controls and notification, and policies, you need a secure and efficient way to meet requirements.

Solution

Deployment and configuration of technology solutions including but not limited to:

- eGovern - a data classification solution that will make life easier for both information governance practitioners and end users.
- .eNotify - the only legal hold management and preservation solution built from the ground up for Microsoft Office 365.

What we deliver

- Provide a gap analysis of where you are in your journey to GDPR compliance
- Conduct file and email analysis to identify where personal data resides in your environment
- Provide technology recommendations
- Develop a mitigation plan with timelines
- Create a document detailing step by step process for conducting GDPR data subject requests using Office 365 and eGovern
- Provide a written defensible and repeatable GDPR data subject request process

Technical services

- Azure information protection labeling
- Data encryption and protection settings
- Workflow for managing deletion requests configuration
- Advanced governance for retention and disposition
- Advanced threat protection for GDPR notification

People. Partnership. Performance.
