AACER® Cashiering Services automate and replace manual cashiering operations

We automatically track each trustee payment, including the payment details, and associate the payment with the applicable loan or loans in your portfolio.

Problem: Manually tracking and mapping electronic and paper check payments from trustees to post payments to corresponding accounts causes headcount cost, process risk, and delays in posting with associated income loss.

Solution: AACER® Cashiering Services automate your old processes using proprietary algorithms to retrieve trustee payment voucher data and automatically identify corresponding accounts in loan portfolios for payment processing and for many other day-to-day activities that would otherwise be risk-prone and costly.

What we offer

Confidence. AACER® is the number one provider of bankruptcy court information in the U.S., and is used by the largest companies and organizations every day.

Cost reduction. We use automation so that you may reallocate headcount for other important activities.

Risk reduction. Our automation, including process best practices, eliminates errors made in human processing.

Speed. We track trustee payments as they are made, meaning no more waiting for the mail to process payments. Allocate your cash in a timely manner.

How we deliver

We automatically deliver daily results to you in our online platform, with robust on-demand review and export features. And you can use our APIs for system-to-system exchange to further automate your processes.
