

AACER Platform for Bankruptcy Servicing

A bankruptcy information services platform built on superior data, technology and expertise.

Gain valuable insights, scale operations, reduce risks and improve case outcomes by providing access to complete, accurate and timely bankruptcy data. Integrate with your customer data, servicing systems or third-party applications to improve digital workflows and optimize bankruptcy operations.

Increased Insights With Bankruptcy Data

Identify your risks and remain compliant with bankruptcy regulations utilizing complete, accurate and timely notification of new or updated case filings.

Identify and report on bankruptcy data using the largest default dataset in the industry, going back to 1950.

Analyze opportunities to save time and money by replacing manual steps with automation.

Easily identify bankruptcy filings.

Efficiently Scale Bankruptcy Operations

Access multiple data sources in a single platform, including PACER, National Data Center, your customer data and other third-party resources.

Automate manual processes at scale to reduce errors and optimize workflows.

Lower labor costs to manage spikes in bankruptcy volume and flatten headcount fluctuations.

Minimize document sourcing costs with AACER LinkShare™ and potentially eliminate data warehousing costs for in-house document storage and access.

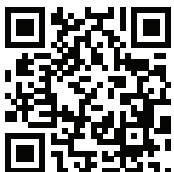

Reduce Risks & Improve Outcomes

Never miss a filing, critical docket event or claim status change with our powerful case search and bankruptcy monitoring system.

Make informed decisions when considering new credit lines or credit extensions, and when evaluating portfolio acquisitions from originators.

Reduce potential compliance and reputation risks, as well as ease audit processes.

Increase speed and accuracy, and reduce costs, by enabling APIs with your system of record and automation of tasks using workflow queues in AACER.

Save Time. Reduce Costs & Risks. Increase Efficiencies.

Platform Features

AACER provides the best bankruptcy data available in the market, sourced from the U.S. Bankruptcy Courts' PACER system; but it is much more than a PACER replica. AACER is the industry's most comprehensive bankruptcy database platform for both secured and unsecured portfolios.

Filer Match & Notify

Performs a search of all U.S. bankruptcy courts nightly, matches client portfolios, and provides a notification each business day of new bankruptcy filings.

Docket, Claims & Disposition Monitoring

Monitor bankruptcies for client portfolios identifying changes across key docket, disposition and claims register events. Automating, streamlining and supplementing bankruptcy case review processes to prevent missing a critical deadline or event.

Case Search & Document Retrieval

On-demand access to court documents and case data from more than 35 million bankruptcy cases and more than 200 million stored bankruptcy court documents. With a single login for all jurisdictions, identifying the correct case details requires little to no effort. Minimize costs with AACER LinkShare™, potentially eliminating the use of a data warehouse or in-house document storage and access.

Cashiering

Match trustee payment information from the National Data Center to your loan portfolio, eliminating manual processing errors and reducing the cost and risk associated with misapplication of trustee payments, both pre-petition and post-petition.

API Integrations

Retrieve bankruptcy case information seamlessly and automate updates in realtime for instantaneous information exchange.

Specialty Services

Let our experts optimize and package the precise data needed to support critical business decisions while on-boarding, optimizing operations, auditing, quality control and other requirements throughout the life of the bankruptcy.

Premium Data Services

Extract pertinent information from over 85 filed bankruptcy documents and thousands of data points with industry-leading data extraction technology and validation services. Allowing clients to shift the manual document review to automation for end users and converting unstructured data to ingestible structured data format.

BNC Electronic Noticing

Leverage the automation of electronic bankruptcy notices and receive parsed data with daily summaries and reporting. Turning paper mail into electronic email delivery.

Special Data Projects

Utilize AACER's sophisticated algorithms with a wide variety of specialty services including portfolio acquisitions, bankruptcy notifications, compliance audits, data true-ups, remediations and other data uses as applicable.
