

Increase privilege review accuracy, cost efficiency, and productivity using AI.

Automate privilege review and log creation with a flexible, AI-native solution that identifies entity insights, adapts to user instructions, and delivers defensible results at scale.

Accelerate early insight

into entities, relationships, and privilege scope before review using Epiq Assist™ to interrogate the dataset.

Enhance privilege detection

with a knowledge layer that automatically surfaces entity relationships, maps email domains to law firms, and identifies lawyer roles.

Achieve greater precision

with AI guided by reusable jurisdiction- and matter-specific instructions, privilege categories, and sensitivity levels.

Identify privilege indicators

with AI that examines threads, metadata, and email families for context and patterns not found in document-by-document review.

Reduce manual effort

by generating privilege logs with fields automatically formatted to user specifications.

Ensure accuracy and defensibility

with provided metrics, reasoning, and line-level citations.

Why Epiq Legal Solutions?

Experience the advantage of solutions from a partner specializing in legal.

Drive decisions with AI solutions that combine people, process, technology, and data.

Utilize Epiq experts for guidance or to manage the privilege workflow.

Rerun classification at any point in the workflow for no additional charge.

Strengthen privilege review with AI that brings intelligence, transparency, and automation to every stage of the privilege workflow.

<p>Privilege Scope and Understanding</p>	<ul style="list-style-type: none"> – Investigate entities and privilege scope using Epiq Assist to ask natural language questions of the dataset before review. – Receive instant answers with links to supporting documents.
<p>Entity Enrichment and Classification</p>	<ul style="list-style-type: none"> – Upon ingestion, automatically extract and map email domains to law firms, identify attorney roles, and surface entity relationships. – Designate entity tags. – Reuse entity intelligence across matters.
<p>Metadata Extraction and Normalization</p>	<ul style="list-style-type: none"> – Extract metadata at the thread level. – Configure non-standard fields for extraction. – Normalize lawyer identifiers, domains, and email addresses. – Save preferred name formats and titles and reuse across matters.
<p>Privilege Classification</p>	<ul style="list-style-type: none"> – Tailor classification instructions and privilege and sensitivity categories for individual cases or across matters. – Edit prompts, protocols, and classification instructions at any point. – View reasoning and line-level citations for every classification decision.
<p>Privilege Log Creation</p>	<ul style="list-style-type: none"> – Adjust privilege log fields for user requirements. – Automatically generate descriptions and explanations for every document. – Export and load results into a review platform for QC.
