

Streamline complex eDiscovery workflows.

Transform eDiscovery work with an agentic eDiscovery system that executes complex workflows from early case assessment (ECA) through production in a single conversational thread.

Simplify complex eDiscovery workflows with confidence using Claude and a proprietary intelligence layer grounded in expertise and best practices.

Gain Immediate Access

Begin quickly with no additional install required connecting through [Epiq Access](#) single sign-on.

Reduce Manual Effort

Understand data, configure workspaces, execute workflows, and validate results with a natural language query.

Leverage Industry Best Practices

Use AI with a proprietary reasoning and execution layer informed by decades of experience supporting global corporations and law firms.

Tailor Workflows

Incorporate the appropriate standards and protocols into workflows using organization- and matter-level playbooks.

Maintain Data Security and Chain of Custody

Automatically apply user permissions from the underlying eDiscovery platform.

Ensure Quality and Defensibility

Rely on guidance for processing errors and built-in enterprise controls, including audit logs, quality control, human oversight, and data isolation.

Why Epiq Legal Solutions

Experience the advantage of solutions from a partner specializing in legal.

Drive decisions with AI solutions that combine people, process, technology, and data.

Key Features

Manage workspaces, act on data, and surface insights faster by reducing the manual steps required to execute time-consuming eDiscovery processes. Delegate tasks across:

Workspace management, including moving documents and creating new fields, choices, and folders.

For example:

“Review our attached playbook to find our standard list of required fields, confirm these fields are present in this workspace. For any missing fields, add them to the specs outlined in the playbook.”

Production conflict searches and production set identification, including managing privileged families.

For example:

“Validate this set is production-ready, run it against our standard pre-production conflict searches, and highlight anything that could create downstream issues.”

Document search, summarization, review, and export, including privilege context awareness.

For example:

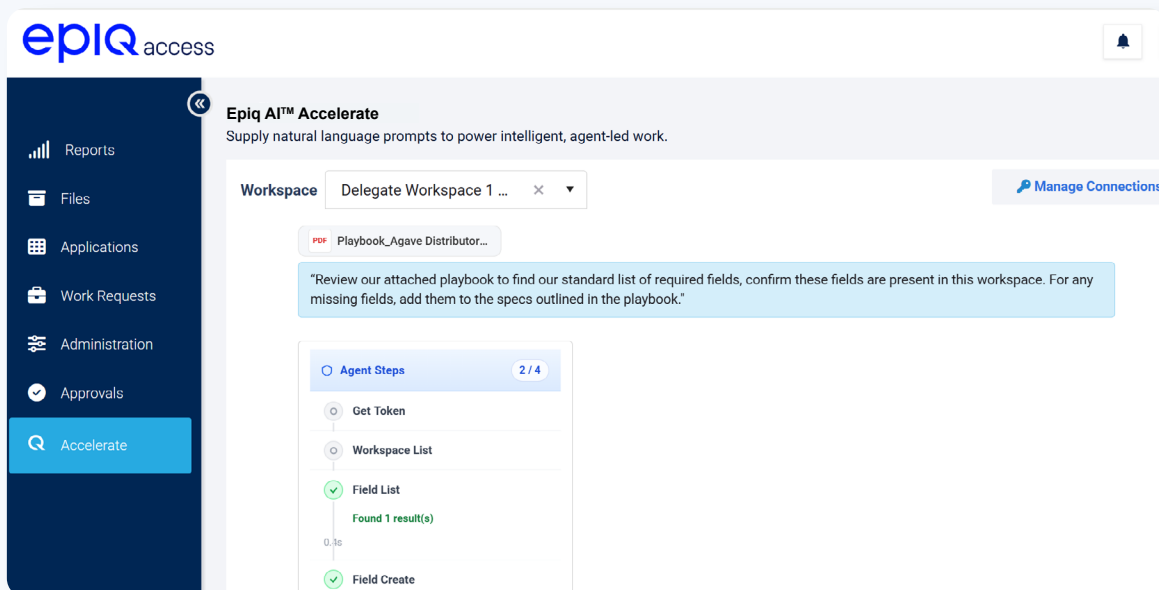

“Prepare a summary of this review set that I can use in a case update. Include key themes, risks, and supporting documents.”

Production set preparation and execution.

For example:

“Prepare this set for production using the same imaging and numbering standards we used in Production 1.”

Execute Accelerate workflows on data in Epiq Discover™ and other leading eDiscovery software.*

*Features may vary for each eDiscovery software.
